Guide to Foreign Trade Statistics: 1967

Chapter I - Introduction

The foreign trade statistics program, conducted by the Bureau of the Census, involves the compilation and dissemination of a large body of data relating to the imports and exports of the United States. These statistics are designed to serve the needs of both Government and nongovernment users who have a wide range of interests. The program, therefore, includes a variety of data presented in many different arrangements and released in the form of published reports which are available by subscription and in reports and machine tabulations which are distributed to Department of Commerce field offices and Bureau of Customs offices for public reference use. This brochure is intended to serve as a guide to the various sources of foreign trade statistics and to inform users of the content and general arrangement of the data. It should, therefore, assist in the location of particular information and make it possible to utilize the available sources to better advantage.

Effective with the statistics for January 1967, some changes are being made in the publication program for foreign trade statistics. These changes include the initiation of several new reports to replace some previous ones which are being discontinued. An important change is the inclusion in many reports and tabulations of separate information on movements by vessel and air in addition to information for all methods of transportation combined.

In view of the dynamic nature of the foreign trade statistics program and the desire to keep this program responsive to the varying needs of users, it is always possible that additional changes in the program may be required. As in the past, any changes of a substantial nature affecting the coverage or presentation of the statistics will be announced in the appropriate publications.

Chapter II - Description of the Foreign Trade Statistics Program

IMPORT STATISTICS COVERAGE

Types of Shipments Included

The import statistics reflect imports of merchandise into the U.S. customs area from foreign countries. The U.S. customs area includes the 50 States, the District of Columbia, and Puerto Rico. Imports into the Virgin Islands (not a part of the U.S. customs area) are not included in the U.S. import statistics, but imports into Puerto Rico from foreign countries are included. Shipments between the United States and its outlying possessions (including the Virgin Islands), between the United States and Puerto Rico, and shipments between any of these outlying areas, are not included in the U.S. import statistics. (See the section on trade with outlying areas of the United States.) The statistics include both government and nongovernment imports, without regard to whether or not the importation involves a commercial transaction. However, American goods returned to the United States by U.S. Armed Forces for their own use are not included. Merchandise shipped under customs custody through the United States in transit from one foreign country to another is not reported as imports. In general, the import statistics are a complete record of the physical movement of merchandise into the United States from foreign countries (except for in-transit shipments), but there are some exclusions of items of relatively small importance in terms of total value, such as personal and household effects.

Types of Imports

Imported merchandise is reported as "general imports" and "imports for consumption."

General imports are the total of the entries for immediate consumption and entries into warehouses, as described below, and therefore reflect the total arrivals of merchandise, whether such merchandise enters consumption channels immediately or is entered into warehouses under customs custody to be subsequently withdrawn for consumption or withdrawn for exportation.

The general import statistics, therefore, reflect the total of merchandise:

- (1) Entered for immediate consumption¹ ("duty free" merchandise, merchandise on which duty is paid on arrival, and merchandise entered into bonded customs manufacturing warehouses for processing and subsequent export of the main product);
- (2) Entered into bonded customs storage warehouses;
- (3) Entered into bonded customs smelting and refining warehouses; and
- (4) Entered into bonded storage warehouses in foreign trade zones as "privileged merchandise."²

¹The terms "entered for immediate consumption" and "withdrawn from warehouse for consumption" are taken from the language used in handling the transactions through customs, and are sometimes misleading in their implication that the merchandise is immediately assimilated by being processed, merchandised, or consumed. Although all customs barriers to such assimilation have been removed, merchandise for "immediate consumption" may, in fact, be warehoused by the importer outside of customs custody. In the case of withdrawals for "consumption," although duties have been paid and the goods released from customs control, they may remain in storage for a further period of time. Any of this "for consumption" merchandise, of course, could conceivably be exported subsequently to its release from customs custody, and thus never enter actual U.S. consumption channels. For these reasons the term "imports for consumption" is somewhat inappropriate to describe the statistical series. Many countries use the term "special imports" to designate statistics compiled on this basis.

²"Privileged status" for foreign merchandise in a foreign trade zone means that a warehouse entry is filed for the merchandise and the tariff classification for duty purposes and the amount of duty are determined on the basis of the classification of the merchandise and the duties applicable when the warehouse entry is filed. This classification and amount of duty apply to the merchandise if it is brought into the customs area at a later date, even though the rate of duty or the merchandise itself may have been changed in the meantime. Ordinarily an import entry is not filed when foreign merchandise enters a foreign trade zone, but is filed when the merchandise leaves the foreign trade zone and enters U.S. customs territory.

Imports for consumption are the total of the entries for immediate consumption and the withdrawals from warehouse for consumption, as described below, and, therefore, reflect the total of commodities entered into U.S. consumption channels. Imports for consumption statistics include merchandise:

(1) Entered for immediate consumption¹ (as parenthetically explained above);

(2) Withdrawn from bonded storage warehouses for consumption¹;

(3) Withdrawn from bonded smelting and refining warehouses for consumption or export;

(4) Withdrawn from bonded storage warehouses and transferred to bonded manufacturing warehouses for manufacturing and export; and

(5) Entered into bonded storage warehouses in foreign trade zones as "privileged merchandise."²

Monthly Coverage

It is the objective of the compiling procedures, insofar as practical, to include shipments in the import statistics for the month of import which, in general, is based on the date of filing of the import entry (immediate consumption or warehouse entry) or warehouse withdrawal document.³ However, because of processing problems, there has always been a carryover of a small percentage of items from the proper month to a subsequent month (usually the month immediately following).

In general, except for the month when a change in the carryover is introduced, the carryover should have little effect on month-to-month comparisons of overall import totals since the carryover of the previous month should compensate roughly for that of the following month. For smaller segments--commodity, country, and commodity by country totals--there is also some compensation on a month-to-month basis, but comparisons should be made in awareness of the possibility that the figures for a given month may represent more or less than the amounts shipped during the month, especially where the volume of trade is not large.

SOURCE OF INFORMATION

The source of information on imports of merchandise is the import entry and warehouse withdrawal forms which importers are required to file with customs officials. Statistical factors of country of origin, net quantity, value, and commodity classification are verified by customs officials on formal consumption and warehouse entries filed for transactions valued over \$250 which are ordinarily subject to examination for customs appraisal purposes. The statistical copy of the entry is corrected if it does not accurately reflect the information called for by the statistical requirements. Information on warehouse withdrawals which account for approximately 10-percent of the total value of imports for consumption, while not subject to the verification procedure directly, should be improved indirectly (due to education of importers/brokers) by the verification of the warehouse entries to which they correspond.

³For shipments by vessel, merchandise is not included in the statistics prior to the date of formal entrance of the vessel (i.e., the date of the inward customs manifest for the vessel).

VALUATION

The dollar value shown in the import statistics is defined generally as the market value in the foreign country, and therefore excludes U.S. import duties, freight charges from the foreign country to the United States, and insurance. Value information is required to be reported on import entries in accordance with Section 402 and 402a of the Tariff Act of 1930, as amended.

COMMODITY INFORMATION

The basic import data are initially compiled in terms of the commodity classifications in Tariff Schedules of the United States Annotated (TSUSA). In reports such as FT 135, FT 150, and FT 155, the TSUSA data are presented in terms of a rearranged commodity classification system--Schedule A, Statistical Classification of Commodities Imported Into the United States, which is based on the Standard International Trade Classification, Revised (SITC).⁴ Schedule A was constructed by the Bureau of the Census in order to provide for the summarization of data for the approximately 10,000 TSUSA classifications into about 2,200 commodity groupings which are meaningful in terms of commodities important in the U.S. import trade and, at the same time, to provide data in terms of the Standard International Trade Classification outline which are comparable, insofar as possible, to the foreign trade statistics compiled by other trading nations.

The foreign trade statistics program includes monthly and annual import data in terms of both Schedule A and TSUSA classifications. In addition, annual data in terms of classifications based on the Standard Industrial Classification (SIC) are also released. This rearrangement of the import data into a structure related to the origin of production is issued as soon as possible after the compilation of the original annual import data. Information regarding the SIC-based import product classifications is contained in Report FT 210 which presents import data in SIC-based product classification by area of origin arrangement. Additional data in terms of the SIC-based classifications are contained in tabulations IA 275 and IA 276.

Information on imports of commodities classified on the basis of "end use" is contained in machine tabulation IM 171. These data are available for reference use at principal locations.

COUNTRY AND AREA OF ORIGIN

The country reported in the statistics as the country of origin is defined as the country where the merchandise was grown, mined, or manufactured. In instances where it is known that the country of origin cannot be determined, the transactions are credited to the country of shipment.

In foreign trade reports and tabulations, countries are presented in the order in which they are listed in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in reports and tabulations to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered to be a part of the country for statistical purposes.

⁴United Nations Statistical Papers, Series M, No. 34, 1961.

Schedule C is published as Annex B in Tariff Schedules of the United States Annotated. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

The major world areas for which foreign trade data are shown represent groupings of individual Schedule C countries with the exception of Canada, the United Kingdom, and Japan which are treated as separate areas. A list showing the major world areas and the individual countries included in each area appears in Reports FT 150 and FT 155. The country designations UNIDENT and Unidentified Countries are used to reflect imports from countries which could not be identified because of illegible reporting on import entries for low-valued shipments.

CUSTOMS DISTRICT FOR IMPORTS

For imports by all methods of transportation combined, merchandise is shown as imported into the customs district in which it is cleared through customs for entry into consumption channels or entered into customs warehouse which, in either case, may not be the district at which the merchandise arrived in the United States nor the final point of destination of the merchandise in the United States. Importations by mail are credited to the customs district at which the import entry is filed. Imports credited to interior districts represent imports by air or imports leaving customs custody in such districts after having been transported in customs bond from a border point or seaport. For imports by vessel and air, the district (or port) of unloading is also shown in some instances. This may differ from the district of entry of the merchandise.

The names and codes of the customs districts and ports are listed in Schedule D, Code Classification of United States Customs Districts and Ports Used in Compiling the United States Foreign Trade Statistics. Imports of vessels moving under their own power or afloat are included under a single code (District 60) and are not reported by individual customs district of entry. Also, estimates for shipments valued \$250 and under are reported under a single code (District 99). Schedule D is published as Statistical Annex A in TSUSA. Copies of Schedule D may also be obtained free of charge from the Bureau of the Census.

ESTIMATED DATA FOR LOW-VALUED IMPORTS

Data on imports valued \$250 and under reported on both formal and informal entries (informal entries, by definition, contain items valued not more than \$250) are estimated from a 1-percent sample. The estimates for shipments valued \$250 and under are shown under Schedule A commodity code 9900000 and TSUSA number 9999500. These estimates are excluded from the other seven-digit commodity codes. However, these estimates for low-valued shipments are included in the section 9 total, the country and area totals and the total for U.S. imports.

The statistics for commodity codes from which the low-valued shipments are excluded are undercounted to the extent that such low-valued shipments of the particular commodity are made. The total value so excluded generally amounts to less than 2 percent of the monthly

import total. Although subject to considerable variability,⁵ particularly where the estimated amounts are relatively small, these estimates for low-valued imports may be of some interest as a rough guide to the general magnitude of the effect which the exclusion of the items has on the commodity data for individual areas or countries. An indication of the sampling variability of the estimates may be obtained by using the number in sample in conjunction with the variability table which appears in the General Explanation of Reports FT 135, FT 150, and FT 155.

EXPORT STATISTICS COVERAGE

Types of Shipments

With the exceptions described below, U.S. export statistics record the physical movement of merchandise out of the U.S. customs area to foreign countries, without regard to the method of financing, and without regard to whether or not the exportation takes place in connection with a commercial transaction.⁶ The U.S. customs area includes the 50 States, the District of Columbia, and Puerto Rico. Exports from Puerto Rico to foreign countries are therefore included in the statistics. However, the statistics do not include shipments between the United States and Puerto Rico, between the United States and its outlying possessions (including the Virgin Islands), or between any of these outlying areas. (See the section on trade of outlying areas of the United States.)

Excluded from the Statistics

The following types of shipments from the U.S. customs area to foreign countries are excluded from the statistics:

1. Shipments to U.S. Armed Forces for their own use, including shipments to U.S. armed services post exchanges, etc., and a few other types of shipments for U.S. Government use which, though not consigned to our armed forces, are similarly identified with activities carried on for the direct benefit of the U.S. Government. For example, the following are excluded:
 - a. Shipments of office furniture, equipment, and supplies for the use of U.S. Government offices.
 - b. Shipments of food, medicines and related items, and other commissary supplies to U.S. Government offices or employees for their own use.

⁵ The estimated total for low-valued imports reported under Schedule A commodity number 9900000 or TSUSA number 9999500 is subject to a sampling variability of 4 to 5 percent. This means that the chances are 2 out of 3 that a complete tabulation would have resulted in a figure that differed from the estimate by no more than 4 to 5 percent. The estimates by country under Schedule A commodity number 9900000 or TSUSA number 9999500 are subject to greater sampling variability--around 13 percent for countries with about 200 low-valued shipments in the sample; around 25 percent for countries with about 75 shipments in the sample and over 25 percent for smaller sample sizes.

⁶ Since it is the movement of merchandise out of the United States which is being measured, the statistics do not, of course, include U.S.-owned or/-financed goods moving directly from one foreign country to another.

- c. Shipments for the construction and maintenance of U.S. satellite tracking stations in foreign countries.
 - d. Shipments to the Canal Zone for the exclusive use of the Panama Canal Zone Government or the Panama Canal Company and shipments of supplies and material to contractors in the Panama Canal Zone for the construction and/or maintenance of the Panama Canal Zone and its facilities.
 - e. Shipments in connection with the U.S. Antarctic Research Program.
2. Merchandise shipped in transit through the United States from one foreign country to another, when documented as such through U.S. customs. (Foreign merchandise which has entered the United States as an import and is subsequently reexported is not treated as in-transit merchandise, and is shown separately as "Exports of Foreign Merchandise.")
 3. Bunker fuel and other supplies and equipment for vessels and planes engaged in foreign trade. (Information on bunker fuel is published in Report FT 810. See the section on Summary Reports in Chapter III.)
 4. Gold and silver in the form of ore, sweepings, scrap, bullion, or coins. (Information on exports and imports of gold and silver is published in Report FT 2402. See the section on Summary Reports in Chapter III.)
 5. Electrical energy.
 6. Some types of shipments of relatively small significance, such as low-valued or noncommercial exports by mail, temporary exports and the return of temporary imports, household and personal effects of travelers, goods for the personal use of U.S. Government employees abroad, etc.

Monthly Coverage

In general, compiling procedures provide for the inclusion of shipments in the statistics for the month of exports.⁷ However, because of processing problems, there has always been a carryover of a few percent of shipments from their proper month to a subsequent month, usually the following month. The carryover should have little effect on month-to-month comparisons of overall export totals since the carryover of the previous month should compensate roughly for that of the following month.

For smaller segments--commodity, country, and commodity by country totals--there is also some compensation on a month-to-month basis, but comparisons should be made in awareness of the possibility that the figures for a given month may represent significantly more or less than the amounts shipped during the month, especially where the volume of trade is not large.

⁷With minor exceptions, the date of export for shipments other than by mail is considered to be the date when the shipment leaves the United States, or, in the case of vessel or air shipments, the date when the carrier on which it leaves the United States departs (or is cleared from) the port at which the merchandise was laden on such carrier. For mail shipments, the date of export is considered to be the date of mailing.

Definition of Exports of Domestic and Foreign Merchandise

Exports of domestic merchandise include commodities which are the growth, produce or manufacture of the United States, and commodities of foreign origin which have been changed in the United States from the form in which they were imported, or which have been enhanced in value by further manufacture in the United States. Sugar refined in this country from imported raw sugar, flour ground from imported wheat, and ores or metal smelted or refined from imported ores or metal are examples of commodities considered to be domestic for statistical purposes when exported to a foreign country. Also when material or parts of foreign origin are imported into the United States and incorporated with material or parts produced in the United States, the complete product is considered to be a domestic product and the imported parts lose their identity as foreign merchandise. Exports of foreign merchandise include commodities of foreign origin which have entered the United States as imports and which, at the time of exportation, are in substantially the same condition as when imported.

SOURCE OF INFORMATION

The source of information on export shipments (except for Department of Defense Military Assistance Program Grant-Aid shipments which are reported directly to the Bureau of the Census by the Department of Defense) is the Shipper's Export Declaration, Commerce Form 7525-V, which exporters are required to file with customs officials. Exporters are instructed to report value and country of destination information in accordance with the definitions given below.

VALUATION

The valuation definition used in the export statistics is the value at the seaport (any port which is accessible to seagoing vessels), border point, or airport of exportation. It is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port of exportation. However, it is sometimes difficult for an exporter to assign a valuation in accordance with this definition. For example, on a rail or truck shipment from an interior U.S. point to an interior point in Canada the amount of freight to be included in the export valuation to provide a value figure at point of export must frequently be estimated. In some cases the freight charges from the interior point to either the border point or seaport may be omitted completely, particularly those for which the Shipper's Export Declarations are prepared by the broker or where the usual export price quotation is f.o.b. an interior U.S. point. In other cases the export value is difficult to determine or must be estimated as in the case of export shipments from a business concern to its own subsidiary abroad. In other cases the value figure shown on the declaration may include ocean freight or insurance charges which should not be included under the definition.

COMMODITY INFORMATION

Commodity Classification

Export commodity information is compiled in accordance with the classifications established in the January 1965 edition of Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported From the United States. The 1965 edition of Schedule B which was

based on the Standard International Trade Classification Revised,⁸ was developed with the primary objective of instituting a classification system providing for those detailed classifications or building blocks' which would permit comparison of the U.S. export statistics with the foreign trade statistics of other countries as well as with data on domestic production.

Some of the Schedule B commodity descriptions used in foreign trade reports and tabulations are necessarily abbreviated to save printing costs or because of limited space and therefore, in many cases, they do not contain all of the qualifying information necessary to define completely the commodity for which statistics are shown. For complete definition of the individual Schedule B commodity classifications, reference should be made to the 1965 edition of Schedule B.

In addition to monthly and annual export data for Schedule B classifications, annual data in terms of classifications based on the Standard Industrial Classification (SIC) are also released. This rearrangement of the export data into a structure related to the origin of production is issued each year as soon as possible after the compilation of the original annual export data. Information regarding the SIC-based export product classifications is contained in Report FT 610 which contains export data in SIC-based product classification by area of destination arrangement. Additional data in terms of the SIC-based classifications are contained in tabulations EA 675 and EA 676.

Information on exports of commodities classified on the basis of "end-use" is contained in machine tabulation EM 571. These data are available for reference use at principal locations.

Shipments Valued Under \$100

For exports by all methods of transportation combined, information on individual export shipments valued under \$100 is reported under Schedule B number 931.0040 without classification by commodity. Value information for such shipments is estimated each month on the basis of constant percentages of the individual country totals. The statistics for commodity classifications other than Schedule B number 931.0040 are undercounted to the extent that under \$100 shipments of the commodity are made. This is believed to have only negligible effect on the statistics for most commodities.

COUNTRY AND AREA OF DESTINATION

The country of destination is defined as the country of ultimate destination or the country where the goods are to be consumed, or further processed or manufactured. However, the statistics do not always reflect this definition since, at the time of exportation, the shipper may not know the ultimate destination of the shipment. In such cases, the shipments are credited to the last country to which the exporter knows that the merchandise will be shipped in the same form as when exported. It follows, therefore, that the statistics will tend to be overcounted for shipments to transshipment countries such as Hong Kong, Belgium, Netherlands, etc., and undercounted for other countries.

Countries are presented in reports and tabulations in the order in which they are listed in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in reports and tabulations to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered to be a part of the country for statistical purposes. Schedule C is published as a part of Schedule B. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

The major world areas for which foreign trade data are shown represent groupings of individual Schedule C countries with the exception of Canada, the United Kingdom and Japan which are treated as separate areas. A list showing the major world areas and the individual countries included in each area is included in the monthly issues of Reports FT 450 and FT 455.

CUSTOMS DISTRICT FOR EXPORTS

With the exceptions mentioned below, export shipments are credited statistically to the customs district through which the shipment clears when it leaves the United States. Therefore, the customs district shown in the statistics is not necessarily the district in which the merchandise was grown, manufactured, or otherwise originated.

Exports are credited to customs districts as follows:

1. For exports by vessel or air, the shipments are credited to the customs district in which the merchandise is loaded on the vessel or aircraft which takes the merchandise out of the country.
2. For exports by rail, truck, or pipeline, the shipments are credited to the customs district through which the merchandise crosses the U.S. border into foreign territory.
3. Aircraft exported under their own power are credited to the customs district from which they are flown out of the United States.

The names and codes of the customs districts and ports are listed in Schedule D, Code Classification of United States Customs Districts and Ports Used in Compiling the United States Foreign Trade Statistics. All mail shipments are credited to one special district (District 80) and are not reported according to the geographical location of the post office from which the merchandise was mailed nor the customs district from which the mail leaves the United States. Likewise, vessels moving under their own power or afloat are reported under District 60 and shipments individually valued under \$100 are reported under District 70. Schedule D is published as a part of Schedule B. Copies of Schedule D may also be obtained from the Bureau of the Census.

SECURITY RESTRICTIONS

Effective with the statistics for January 1967, some changes will be made in the presentation of data on exports of Special Category commodities for which complete information is not released for security reasons. In the statistics released for periods prior to 1967, the area, continent, country, and district totals exclude information on Special Category commodities. For each of these commodities, a total is given for exports of the commodity

⁸United Nations Statistical Papers, Series M, No. 34, 1961.

to all countries combined. Beginning with the statistics for January 1967, the area and continent totals as well as totals for many individual countries will include exports of Special Category commodities. The published reports and tabulations will contain appropriate headings and footnotes to indicate the extent to which data for Special Category commodities are included in or excluded from the statistics. Also, an announcement containing a complete explanation of the changes in presentation and the Special Category coverage will be released with the January 1967 statistics. A list of the Special Category commodities (published in the January 1965 issue of Report FT 410) may be obtained from the Bureau of the Census.

SAMPLING OF LOW-VALUED EXPORT SHIPMENTS

The export statistics reflect fully compiled data for shipments to Canada individually valued \$2,000 and over and shipments to countries other than Canada individually valued \$500 and over. Data for shipments to Canada individually valued \$100-\$1,999 are estimated from a random 10 percent sample of such shipments while shipments to other countries individually valued \$100-\$499 are estimated from a random 50 percent sample. During the process of tabulating the statistics, the fully compiled and estimated data are combined. Additional details regarding the sampling procedure are contained in the export publications.

Since statistics based on a sample are not expected to agree exactly with the results that would be obtained from a complete tabulation, the export totals are subject to some degree of sampling variability. In general, the higher export figures will have smaller sampling variability in percentage terms. Low value figures are likely to have a high variability in percentage terms, although small in terms of the value of the trade. The sampling explanation in the detailed export reports contains further information regarding sampling variability in the export figures.

In view of the relatively low level of sampling variability involved in most of the totals, most users will not need to know the extent to which given figures are based on estimated data. Therefore, information as to the number of shipments in the sample is not included in published reports (except for Canada data). However, this information is contained in machine tabulations or it may be obtained from the Bureau of the Census, possibly with a charge for the work involved. This information may be used to obtain a rough indication of the estimated value of the low-valued shipments included in the total.

STATISTICS ON TRADE BY VESSEL AND AIR

In addition to the import and export statistics previously discussed which represent trade by all methods of transportation combined, statistics are also compiled on the exports and imports of commodities which move by vessel and by air. Import Reports FT 150 and FT 155 and export Reports FT 450 and 455 contain separate value and shipping weight figures for vessel and air along with total value figures on trade by all methods of transportation. Since importers and exporters are required to report shipping weight for vessel and air shipments only, shipping weight information is not available for other methods of transportation. Therefore this information is not shown for all methods of transportation combined. The shipping weight figures shown for vessel and air

represent the gross weight of shipments, including the weight of containers, wrappings, crates, and moisture content.

Information on vessel and air shipments is also contained in Summary Report FT 990. Additional summary statistics on waterborne trade are presented in Report FT 975 (annual data on vessel entrances and clearances) and Report FT 985. Summary data on air-borne trade are presented in Report FT 986.

More detailed statistics on waterborne trade are provided in machine tabulations. These tabulations contain information for imports and exports separately, showing such data as type of vessel service, U.S. customs district and port of lading or unlading, foreign port of unlading or lading, country of origin or destination, trade area, coastal district and vessel entrances and clearances. Separate data are also provided on inbound and outbound waterborne intransit shipments and on exports of Department of Defense controlled cargo under U.S. foreign aid programs and Special Category non-Department of Defense controlled cargo. For information regarding specific tabulations containing data on waterborne trade, see Chapter IV which contains illustrations of machine tabulations.

In using the statistics on trade by vessel, air, and all methods of transportation, it should be noted that there are some differences in the coverage of these statistics, primarily as follows:

1. Imports and exports of vessels moving under their own power or afloat, aircraft flown into or out of the United States, and mail and parcel post shipments are included in the "all methods" data but are excluded from the vessel and air statistics.

2. For exports of Special Category commodities, which are included in the "all methods" statistics, information is included in the air value and shipping weight data and in the vessel value data but excluded from the vessel shipping weight data.

3. Estimated data for imports valued \$250 and under are included in the "all methods" data and in the value data for vessel and air but are excluded from the shipping weight data for vessel and air.

Discussions regarding the compilation and presentation of the statistics are included in the explanations in published reports. Notations are also included in the headings for tables in publications and machine tabulations.

TRADE OF OUTLYING AREAS OF THE UNITED STATES

Coverage

The statistics on U.S. trade with Puerto Rico and with outlying areas of the United States cover shipments by all methods of transportation combined. Shipments from the United States to U.S. Armed Forces for their own use are not included in the statistics. Shipments from the United States to other U.S. Government agencies, except office furniture, equipment and supplies for the use of such agencies, are included.

Statistics on trade between the United States and Puerto Rico and other outlying areas is published in Report FT 800. Additional data regarding this trade are presented in machine tabulations FT 160, FT 161, VI 581, and EM 594. Any trade which may take place between Puerto Rico and the other areas is included in the statistics as follows: Shipments from Puerto Rico to other areas, except the Virgin Islands, are included in statistics on shipments to the United States; shipments from Puerto Rico to the Virgin Islands are included in the statistics on shipments from the United States to the Virgin Islands; shipments from the Virgin Islands to Puerto Rico are included as shipments from the Virgin Islands to the United States; shipments from Guam and American Samoa to other areas are included in statistics on shipments from Guam and American Samoa to the United States. No report is made by the Bureau of the Census on any shipments which may originate in other outlying areas.

Source of Information

The source of information for shipments from the United States to Puerto Rico and to the other areas, and from Puerto Rico to the United States, is the Shipper's Export Declaration (Department of Commerce form 7525-V) which shippers are required to file with customs officials. The source documents used to compile information on shipments from the Virgin Islands, Guam, and American Samoa to the United States are the import entries which are filed by the importer in advance of, or at the time the merchandise arrives in the United States.

Valuation

The valuation definition used in the statistics on shipments from the United States to Puerto Rico and the other areas, and shipments from Puerto Rico to the United States is the same as the value definition for U.S. exports to foreign countries, i.e., the value at the seaport, border point, or airport of exportation. It is based on the selling price (or cost if not sold), and includes inland freight, insurance, and other charges to the port of exportation. The value shown in the statistics on shipments from the Virgin Islands, Guam, and American Samoa to the United States is defined generally as the market value in the place of origin, excluding any U.S. import duties, ocean freight and marine insurance.

Trade with Foreign Countries

The Virgin Islands of the United States are not a part of the U.S. customs area for the collection of duties and their trade is not included in total U.S. export or import statistics. However, export declarations and import entries are filed with customs officials in the Virgin Islands in the same way as for the U.S. customs area, and separate statistics are compiled by the Bureau of the Census from these documents covering the trade of the Virgin Islands with foreign countries. Information on imports from foreign countries into the Virgin Islands for consumption is presented in machine tabulations IM 141-V and IM 142-V. Data on exports from the Virgin Islands to foreign countries are presented in machine tabulation EM 591. Overall value totals (no commodity or country detail) for imports into and exports from the Virgin Islands are included in Summary Reports FT 970-1 and 970-E, respectively.

Puerto Rico is a customs district within the U.S. customs area, and its trade with foreign countries is included in the export and import statistics showing the trade of the United States with foreign countries. The statistics on trade of Puerto Rico with foreign countries represent exports and imports through the Puerto Rico Customs District and do not necessarily represent exports of commodities originating in Puerto Rico nor imports of commodities for direct consumption in Puerto Rico. Statistics showing commodity detail for such trade are presented in machine tabulations IM 154 and EM 563. Summary Reports FT 970-1 and 970-E also contain overall value totals for imports and exports through the Puerto Rico Customs District.

Data on trade of other outlying areas with foreign countries are not included in reports or tabulations currently released by the Census Bureau.

TOTAL EXPORTS AND IMPORTS ADJUSTED FOR WORKING DAY AND SEASONAL VARIATION

Statistics showing total exports (excluding Department of Defense Military Assistance Program Grant-Aid shipments) and total general imports adjusted for working days and seasonal variation are published in monthly Summary Reports FT 900-E, 900-1, and 990. The publication of the adjusted data reflects the efforts of an Interagency Committee under the chairmanship of the Office of Statistical Standards, Bureau of the Budget. Adjustment factors were developed for the years 1948 forward. Seasonally adjusted data by month for 1948-1966 are available upon request.

Ordinarily once a year, as the data for the most recent year becomes available, seasonal factors are recomputed by the Census Bureau and estimated factors for the year ahead obtained. The new factors are published each year. The recomputation incorporating the latest year's useable data may result in revisions both in the factors previously developed and used and in the adjusted data for several previous years; however, the policy actually followed has been to make such changes only for the prior two years.

The working day factors adjust for the estimated variation in the monthly volume of trade that arises from a given calendar month including a particular day of the week five times in some years and four times in other years. The working day factors also adjust for the variation in the monthly volume of trade that arises from differences in the length of the calendar months, that is, for the differences between 31-day and 30-day months and Februaries. The working day factors were estimated partly from studies of the external evidence of the importance of each day of the week and partly from the evidence contained within the monthly series. The estimated working day variation is removed from the unadjusted series by dividing the working day factor into the unadjusted series.

The seasonal adjustment program of the Census Bureau (X-9 variant of Census Method II for factors through 1963; X-11 variant for 1964-1966) is used to estimate the seasonal factors. These are computed after the data have been first adjusted for working day variation and for dock strikes and unusual variations during certain years in the volume of export and import shipments made during a given month but carried over into the statistics of the following month. The estimate of the seasonal factor component includes the variation which recurs every year with approximately the same timing and magnitude.

The seasonally adjusted series is obtained by dividing the seasonal factor into the series previously adjusted for working days. The X-11 variant is described in The X-11 Variant of the Census Method 11 Seasonal Adjustment Program, Bureau of the Census Technical Paper No. 15, U.S. Government Printing Office, Washington, D.C. 20402—Price 50 cents. Specifications for the X-9 variant are available from the Chief Economic Statistician, Bureau of the Census, Washington, D.C. 20233.

In addition to estimating the seasonal component, Method 11 separates the seasonally adjusted series into estimates of the trend-cycle component and the irregular component. It also provides summary measures of the month-to-month changes of the components and their relations to each other. One of these measures, MCD (months for cyclical dominance) is often helpful when analyzing the economic significance of changes in the seasonally adjusted data. The irregular component includes the erratic types of fluctuation that reverse

direction every month or so. These erratic fluctuations may arise from certain economic events, some political actions, the effects of unusual weather conditions, a change in the method of reporting or processing statistical data, and other causes. They often tend to obscure the more meaningful, underlying cyclical and trend movements. Over longer spans, however, the effects of the trend and cyclical movements cumulate and become dominant over the erratic or irregular movements which tend to cancel one another. MCD is taken as the shortest span over which percentage changes in the cyclical component are, on average (without regard to sign), larger than those in the irregular. Comparisons in the seasonally adjusted series over the MCD span usually reflect cyclical movements. Comparisons over shorter spans often reflect only irregular movements. MCD is now four for both exports and imports. A detailed discussion of how Census Method 11 and the summary measures computed assist in analyzing economic time series is discussed in Electronic Computers and Business Indicators, Occasional Paper 57, National Bureau of Economic Research Inc., New York, 1957.

Chapter III - Published Foreign Trade Reports

The published reports containing foreign trade data fall into two general categories, (a) those containing summary statistics and (b) those containing more detailed data.

Summary Reports

Reports containing summary statistics are released monthly unless otherwise indicated. In some instances monthly reports include both current monthly and cumulative data for the current year, with annual totals appearing in the December issue. For those monthly reports which do not include cumulative data, a separate annual issue is published. A list of the summary reports by number and title is given below. Illustrations of the data included in the reports are presented on the pages indicated. These exhibits may not include all of the qualifying statements which will be included in headnotes or footnotes for the tables, but they indicate the general format and type of information to be found in the reports. Summary reports may be obtained from the Bureau of the Census by subscription.

- FT 810 - Bunker Oil and Coal Laden in the United States on Vessels Engaged in Foreign Trade (See page 12.)
- FT 900-I - Total Import Trade (See page 13.)
- FT 900-E - Total Export Trade (See page 14.)
- FT 975 - Vessel Entrances and Clearances. Published annually only. (See page 15.)
- FT 985 - U.S. Waterborne Foreign Trade Statistics (See page 16.)
- FT 986 - U.S. Airborne Foreign Trade, Customs District by Continent (See page 20.)
- FT 990 - Highlights of U.S. Export and Import Trade (See page 21.)
- FT 2402 - U.S. Gold and Silver Movements (See page 39.)

Detailed Reports

Published reports containing more detailed statistics than those presented in the summary reports are listed below by report number and title of report. These reports

contain current monthly and cumulative data with annual totals appearing in the December issue, except as noted. Illustrations of tables contained in the reports are shown on the pages indicated for each report.

- FT 130 - U.S. General Imports of Cotton Manufactures, Country of Origin by Geneva Agreement Category (See page 40.)
- FT 135 - U.S. Imports for Consumption and General Imports, Schedule A Commodity by Country (See page 41.)
- FT 150 - U.S. General Imports, Schedule A Commodity Groupings, Geographic Area, Country, and Method of Transportation (See page 42.)
- FT 155 - U.S. General Imports, Geographic Area, Country, Schedule A Commodity Groupings, and Method of Transportation (See page 44.)
- FT 410 - U.S. Exports, Schedule B Commodity by Country (See page 46.)
- FT 450 - U.S. Exports, Schedule B Commodity Groupings, Geographic Area, Country, and Method of Transportation (See page 47.)
- FT 455 - U.S. Exports, Geographic Area, Country, Schedule B Commodity Groupings, and Method of Transportation (See page 50.)
- FT 800 - U.S. Trade With Puerto Rico and United States Possessions. Monthly issues contain current data only. Annual data published separately. (See page 53.)

Special Annual Reports

- FT 210 - U.S. Imports for Consumption and General Imports, SIC-Based Product Classification by Area (See page 55.)
- FT 610 - U.S. Exports of Domestic and Foreign Merchandise, SIC-Based Product Classification, by Area (See page 56.)
- FT 246 - U.S. Imports for Consumption and General Imports, TSUSA Commodity by Country (See page 57.)

U.S. GOLD AND SILVER MOVEMENTS IN JUNE 1966

The monetary gold stock of the United States was decreased during June by \$98,686,000 to \$13,433,471,000 at the end of the month as the combined result of earmarking operations, receipts from foreign countries, exports, domestic production and other factors.

Gold held under earmark at the Federal Reserve Banks decreased during June by \$20,327,109 to \$12,954,959,370.

(Source of information on United States monetary gold stock and earmarking operations: Board of Governors of Federal Reserve System.)

U.S. Exports of Foreign Merchandise

Table 5. CONTINENT AND COUNTRY OF DESTINATION TOTALS BY METHOD OF TRANSPORTATION

(Consult introduction for coverage, valuation, and other definitions, the method of handling low value shipments and certain types of shipments not classified by commodity. An explanation of security restrictions is included in the introduction. Special Category shipments are excluded from data for certain countries. These countries are flagged in the table with an asterisk (*). Vessel data also exclude information on shipments of Special Category commodities. The estimated value of general merchandise valued under \$100 is excluded from all data. X-Not applicable)

Chapter IV - Unpublished Foreign Trade Reference Material

As a part of its regular statistical program, the Census Bureau prepares tabulations and reports for public reference use which contain data in various arrangements and in greater detail than the statistics presented in published reports. The tabulations and reports, in general, contain net quantity and value information. In those instances where method of transportation information is included, value data (and frequently net quantity data also) are presented for all methods of transportation combined, with shipping weight and value shown for vessel and air shipments. Value and shipping weight are also presented in tabulations containing data on waterborne trade only. If a monthly tabulation contains cumulative as well as current monthly data, annual information is presented in the December issue. (See the sections on import and export annual tabulations for additional sources of annual data.)

Lists of the tabulations and reports, showing identification number and general content of each, appear below. The exhibits on the following pages show the type of information presented in individual tabulations. These exhibits may not include all of the qualifying statements which will be included in headnotes for the tabulations when they are released, but they indicate the general format and content of these tabulations.

IMPORT TABULATIONS

Monthly Tabulations

- IM 136 Imports for consumption and general imports—country of origin by TSUSA commodity by unit control by customs district and method of transportation (general imports only), all methods of transportation combined for imports for consumption. Current month.
- IM 141-V Imports for consumption into the Virgin Islands from foreign countries—TSUSA commodity by unit control by country of origin by customs district by type. All methods of transportation combined. Current month.
- IM 142-V Imports for consumption into the Virgin Islands from foreign countries—country of origin by TSUSA commodity by unit control. All methods of transportation combined. Current month.
- IM 145 Imports for consumption and general imports—TSUSA commodity by unit control by country of origin by customs district by rate provision by type and method of transportation (general imports only), all methods of transportation combined for imports for consumption. Current month.
- IM 145 UC-2 Imports for consumption and general imports—TSUSA commodity (unit control 2 only) by country of origin by customs district by type. All methods

of transportation combined. Current month.

- IM 145 A Imports for consumption and general imports—Schedules 1 through 7 TSUSA commodity numbers for items reported under TSUSA numbers 807.0020 and 807.0040 by country of origin. (Articles assembled abroad in whole or in part from U.S. components only.) All methods of transportation combined. Current month.
- IM 146 Imports for consumption—TSUSA commodity by unit control by country of origin. Shows quantity and value, calculated duty, dutiable value, and average ad valorem rate of duty. All methods of transportation combined. Current month and cumulative year-to-date.
- IM 154 Imports for consumption and general imports—customs district by country of origin by TSUSA commodity by unit control and method of transportation (general imports only), all methods of transportation combined for imports for consumption. Current month.
- FT 160 General imports from Guam and American Samoa. TSUSA commodity by unit control by customs district by type. All methods of transportation combined. Current month.
- FT 161 General imports from the Virgin Islands—TSUSA commodity by unit control by customs district by type. All methods of transportation combined. Current month.
- IM 171 General imports—"end-use" commodity categories by country or area arrangement and vice-versa. All methods of transportation combined. Current month and cumulative year-to-date and individual quarters of the year.
- SM 305 Waterborne general imports—type of vessel service by customs district and port of unlading by foreign port of lading by Schedule A commodity (4 digit) by country of origin. Current month.
- SM 305-1T Waterborne in-transit inbound shipments. Same arrangement as SM 305, above.
- SM 311 Waterborne general imports—type of vessel service by trade area by coastal district by country of lading by district of unlading. Current month.
- SM 311-IT Waterborne inbound in-transit shipments. Same arrangement as SM 311, above.

AE 350 No. 1: Alphabetic listing of vessel entrances by name of vessel. Current month.

No. 2: District, port, and manifest listing of vessel entrances by name of vessel. Current month.

Annual Tabulations (For additional sources of annual data, see the preceding list for those monthly tabulations which contain cumulative information).

IA 236 Imports for consumption and general imports—released in two sections: (1) country of origin by TSUSA commodity by unit control by customs district and method of transportation (general imports only), all methods of transportation combined for imports for consumption; (2) country of origin by TSUSA commodity by unit control by customs district, all methods of transportation combined for consumption and general imports, showing calculated duty and dutiable value (imports for consumption only.)

IA 245 Imports for consumption and general imports—released in two sections: (1) TSUSA commodity by unit control by country of origin by customs district by rate provision by type and method of transportation (general imports only), all methods of transportation combined for imports for consumption; (2) TSUSA commodity by unit control by country of origin by customs district by rate provision by type, all methods of transportation combined for consumption and general imports, showing calculated duty and dutiable value (imports for consumption only), prepared semi-annually and annually.

IA 245 UC-2 Imports for consumption and general imports—TSUSA commodity (unit control 2 only) by country of origin by customs district by type. All methods of transportation combined.

IA 253 Imports for consumption and general imports—customs district by TSUSA commodity by unit control by country of origin and method of transportation (general imports only), all methods of transportation combined for imports for consumption.

IA 254 Imports for consumption and general imports—released in two sections: (1) customs district by country of origin by TSUSA commodity by unit control and method of transportation (general imports only), all methods of transportation combined for imports for consumption; (2) customs district by country of origin by TSUSA commodity by unit control, all methods of transportation combined for consumption and general imports, showing calculated duty and dutiable value (imports for consumption only).

IA 275 Imports for consumption and general imports—1-, 2-, 3-, and 4-digit SIC-based commodity arrangement. All methods of transportation combined.

IA 276 Imports for consumption and general imports—8-digit SIC-based commodity by country. All methods of transportation combined.

SA 305 (Same arrangement as SM 305.)

SA 305-IT (Same arrangement as SM 305-IT.)

SA 311 (Same arrangement as SM 311.)

SA 311-IT (Same arrangement as SM 311-IT.)

EXPORT TABULATIONS

Monthly Tabulations (Domestic and foreign merchandise shown separately)

EM 522 Exports of domestic and foreign merchandise—Schedule B commodity by country of destination by customs district of exportation. By method of transportation. Current month.

EM 522 (Double-unit Supplement) Exports of domestic and foreign merchandise—Schedule B double-unit commodities only (unmanufactured cotton and selected manufactured products of cotton and other fibers) by country of destination by customs district of exportation. Current month.

EM 531 Exports of domestic and foreign merchandise—country of destination by Schedule B commodity by customs district of exportation. By method of transportation. Current month.

EM 563 Exports of domestic and foreign merchandise—customs district of exportation by country of destination by Schedule B commodity. By method of transportation. Current month.

EM 571 Exports of domestic and foreign merchandise—"end-use" commodity categories by country or area arrangement and vice-versa. All methods of transportation combined. Current month and cumulative year-to-date and individual quarters of the year.

VI 581 Shipments of merchandise from Puerto Rico to the Virgin Islands. In 7-digit Schedule B commodity arrangement. All methods of transportation combined. Current month.

EM 591 Exports of domestic and foreign merchandise from the Virgin Islands to foreign countries. All methods of transportation combined. Current month.

EM 594 Shipments of merchandise from the U.S. to Puerto Rico—country of destination (Puerto Rico) by Schedule B commodity

	(7-digit). All methods of transportation combined. Current month.
SM 705	Waterborne exports of domestic and foreign merchandise—type of vessel service by customs district and port of lading by foreign port of unlading by Schedule B commodity (4-digit) by country of destination. Current month.
SM 705-1T	Waterborne outbound in-transit shipments. Same arrangement as SM 705, above, plus country of origin.
SM 705 Supplement	Waterborne Department of Defense controlled cargo under U.S. foreign aid programs and Special Category non-Department of Defense controlled cargo—type of vessel service by customs district and port of lading by country/area of unlading. Current month.
SM 711	Waterborne exports of domestic and foreign merchandise—type of vessel service by trade area by coastal district by country of unlading by district of lading. Current month.
SM 711-1T	Waterborne outbound in-transit shipments. Same arrangement as SM 711, above.
AE 750	No. 1: Alphabetic listing of vessel clearances by name of vessel. Current month. No. 2: District, port, and manifest listing of vessel clearances by name of vessel. Current month.

Annual Tabulations

EA 622	Exports of domestic and foreign merchandise—Schedule B commodity by country of destination by customs district of exportation. By method of transportation.
EA 622 (Double-unit Supplement)	Exports of domestic and foreign merchandise—Schedule B double-unit commodities only (unmanufactured cotton and selected manufactured products of cotton and other fibers) by country of destination by customs district of exportation. All methods of transportation combined.
EA 631	Exports of domestic and foreign merchandise—country of destination by Schedule B commodity by customs district of exportation. By method of transportation.
EQ 637	Exports of domestic and foreign merchandise—Schedule B commodity by month arrangement with cumulative year-to-date totals. All methods of transportation combined. Prepared semi-annually and annually.
EA 663	Exports of domestic and foreign merchandise—customs district of exportation by country of destination by Schedule B commodity. By method of transportation.

EA 664	Exports of domestic and foreign merchandise—customs district of exportation by Schedule B commodity by country of destination. By method of transportation.
EA 675	Exports of domestic merchandise—1-, 2-, 3-, and 4-digit SIC-based commodity arrangement. All methods of transportation combined.
EA 676	Exports of domestic merchandise—8-digit SIC-based commodity by country. All methods of transportation combined.
SA 705	(Same arrangement as SM 705.)
SA 705-1T	(Same arrangement as SM 705-1T.)
SA 705 Supplement	(Same arrangement as SM 705 Supplement.)
SA 711	(Same arrangement as SM 711.)
SA 711-1T	(Same arrangement as SM 711-1T.)

Copies of the tabulations included in the preceding lists are available for public reference use at the principal reference locations listed below and at various other Department of Commerce Field offices. (See complete list of field offices at the end of this brochure.) Since the distribution of tabulations varies among field offices, inquiry should be made regarding the availability of particular tabulations at individual field offices.

IMPORTS FOR CONSUMPTION INTO THE VIRGIN ISLANDS FROM FOREIGN COUNTRIES
TSUSA Number by Unit Control by Country of Origin by Customs District by Type

COVERAGE: Imports for consumption are a combination of imports for immediate consumption (type 7) and withdrawals for consumption from bonded warehouses (type 8). See the foreword to Foreign Commerce and Navigation of the United States for a more complete statement on coverage.

COMMOITY CLASSIFICATION: Effective September 1963, the import statistics are compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA) which replaced United States Import Duties Annotated (USIDA) and Schedule A, Statistical Classification of Commodities Imported into the United States.

QUANTITY: The quantities shown in this tabulation for each commodity classification are in accordance with the units of quantity provided in TSUSA.

UNIT CONTROL: In those instances where a TSUSA number has two units of quantity, value is shown with only one of the units. For the items with which value is shown, the unit control column is blank (unit control code zero). Unit control code 2 is used for the items with which value is not shown.

LOW-VALUEO SHIPMENTS: Effective with the compilation of the July 1965 statistics covering imports into the Virgin Islands from foreign countries, importations valued less than \$251 are being compiled on an estimated basis. In this tabulation, these estimates are excluded from the statistics presented for the individual commodity classifications, but are reported under the arbitrary TSUSA commodity number 999 9500 and the arbitrary country code 998. The statistics for the individual commodities are, therefore, undercounted to the extent of such "low-valued" imports.

TOTALS:

1. TSUSA number by unit control by country of origin by Customs district by type.
2. TSUSA number by unit control by country of origin.
3. TSUSA number by unit control.
4. TSUSA schedule.
5. Overall.

Table IM 142 - V

IMPORTS FOR CONSUMPTION INTO THE VIRGIN ISLANDS
FROM FOREIGN COUNTRIES
COUNTRY OF ORIGIN BY TSUSA NUMBER BY UNIT CONTROL

COVERAGE: Imports for consumption are a combination of imports for immediate consumption and withdrawals for consumption from bonded warehouses. See the Foreword to Foreign Commerce and Navigation of the United States for a more complete statement on coverage.

COMMOITY CLASSIFICATION: Effective September 1963, the import statistics are compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA) which replaced United States Import Duties Annotated (USIOA) and Schedule A, Statistical Classification of Commodities Imported into the United States.

QUANTITY: The quantity shown in this tabulation for each commodity classification are in accordance with the units of quantity provided in TSUSA. Except those for individual TSUSA numbers, all quantity totals should be ignored.

UNIT CONTROL: In those instances where a TSUSA number has two units of quantity, value is shown with only one of the units. For the items with which value is shown, the unit control column is blank (unit control code zero). Unit control code 2 is used for the items with which value is not shown.

LOW-VALUEO SHIPMENTS: Effective with the compilation of the July 1965 statistics covering imports into the Virgin Islands from foreign countries, importations valued less than \$251 are being compiled on an estimated basis. In this tabulation, these estimates are excluded from the statistics presented for the individual commodity classifications, but are reported under the arbitrary TSUSA commodity number 999 9500 and the arbitrary country code 998. The statistics for the individual commodities are, therefore, undercounted to the extent of such "low-valued" imports.

TOTALS:

[illegible]

**UNITED STATES IMPORTS OF MERCHANDISE FOR CONSUMPTION
AND GENERAL IMPORTS OF MERCHANDISE**
TSUSA Number by Unit Control by Country of Origin by
Rate Provision by Customs District of Entry by Type by Economic Class

COVERAGE: Imports for consumption are a combination of imports for immediate consumption and withdrawals for consumption from bonded warehouses (types 1, 2, 3 and 6 as defined below). General imports are a combination of imports for immediate consumption and entries into bonded warehouses (types 1, 3, 5 and 6 as defined below). The statistics include merchandise imported by government agencies as well as by private importers, but exclude American goods returned by the U.S. armed forces for their own use. U.S. trade with Puerto Rico and with U.S. possessions and trade between the U.S. possessions is not included in this report, but imports into Puerto Rico from foreign countries are included. Merchandise shipped in transit through the United States from one foreign country to another, when documented as such through U.S. Customs, is not included. See the Foreword to Foreign Commerce and Navigation of the United States for a more complete statement on coverage.

TYPES OF IMPORTS: Imports are classified by type for statistical purposes, as follows: type 1 - merchandise entered for immediate consumption; type 2 - merchandise withdrawn from bonded storage warehouses for consumption, withdrawn from bonded smelting and refining warehouses for consumption or for export, and transferred from bonded storage warehouses to bonded manufacturing warehouses for manufacturing and export; type 3 - merchandise entered into bonded storage warehouses, and entered into bonded smelting and refining warehouses; type 4 - merchandise withdrawn from bonded storage warehouses for exportation (compilation of statistics discontinued effective March 1958); type 5 - merchandise entered into bonded manufacturing warehouses for manufacture and export (direct entry only); type 6 - merchandise entered into bonded storage warehouses in foreign trade zones as "privileged" merchandise.

COMMODITY CLASSIFICATION: Effective September 1963, the import statistics are compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA).

SOURCE: The source of information for all of the imports included in this report is the import entry (various customs forms), which importers are required to file with collectors of customs for each shipment arriving in the United States. Effective January 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified, or corrected as necessary, by customs examiners on all formal consumption and warehouse entries. (Verification of imports valued \$250 or less was discontinued effective July 1965.) Information on warehouse withdrawals, though not subject to the examiner verification procedure directly, should be improved indirectly by the verification of the warehouse entries to which they correspond.

QUANTITY: The quantities shown in this tabulation for each commodity classification are in accordance with the units of quantity provided in TSUSA. Except those for individual TSUSA numbers, all quantity totals should be ignored.

UNIT CONTROL: Unit control code 2 is used to identify commodities for which value is not required.

RATE PROVISION: Rate provision (types of duty) codes 10 through 19 cover free items; codes 21 through 70 cover dutiable items. For a complete list of these codes and their descriptions, see the special notice accompanying this tabulation for September 1963.

ECONOMIC CLASS: Code 0 - agricultural crude materials; code 1 - nonagricultural crude materials; code 2 - agricultural crude foodstuffs; code 3 - nonagricultural crude foodstuffs; code 4 - agricultural manufactured foodstuffs and beverages; code 5 - nonagricultural manufactured foodstuffs and beverages; code 6 - agricultural semimanufactures; code 7 - nonagricultural semimanufactures; code 8 - agricultural finished manufactures; code 9 - nonagricultural finished manufactures.

TOTALS:

1. TSUSA number by unit control by country of origin by customs district by type by economic class.
2. TSUSA number by unit control by country of origin.
3. TSUSA number by unit control.

**UNITED STATES IMPORTS OF MERCHANDISE FOR CONSUMPTION
AND GENERAL IMPORTS OF MERCHANDISE—ONLY COMMODITIES ASSEMBLED
ABROAD WITH FOREIGN AND AMERICAN COMPONENTS**

TSUSA Number by Country of Origin
(Excludes Quantity Only Items)

COVERAGE: Imports for consumption are a combination of imports for immediate consumption and withdrawals for consumption from bonded warehouses. General imports are a combination of imports for immediate consumption and entries into bonded warehouses. The statistics include merchandise imported by government agencies as well as by private importers, but exclude American goods returned by the U.S. armed forces for their own use. U.S. trade with Puerto Rico and with U.S. possessions and trade between the U.S. possessions is not included in this report, but imports into Puerto Rico from foreign countries are included. Merchandise shipped in transit through the United States from one foreign country to another, when documented as such through U.S. customs, is not included. See the Foreword to Foreign Commerce and Navigation of the United States for a more complete statement on coverage.

COMMODITY CLASSIFICATION: Effective September 1963, the import statistics are compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA).

SOURCE: The source of information for all of the imports included in this report is the import entry (various customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Effective January 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified, or corrected as necessary, by customs examiners on all formal consumption and warehouse entries. (Verification of imports valued \$250 or less was discontinued effective July 1965.) Information on warehouse withdrawals, though not subject to the examiner verification procedure directly, should be improved indirectly by the verification of the warehouse entries to which they correspond.

VALUE: The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding U.S. import duties, ocean freight, and marine insurance. Columns identified as "Dutiable value" contain the value of the foreign components in the completed product. Columns identified as "Value U.S. products" contain the value of the American components in the completed product. The column identified as "Outable value" under the general imports heading contains only the value of those foreign components which are in a completed product entered into the U.S. for immediate consumption.

NET QUANTITY: The net quantity shown is the net quantity of the final product. See the Tariff Schedules of the United States Annotated (1963) for the unit of quantity description.

COUNTRY OF ORIGIN AND SHIPMENT: Both countries of origin and countries of shipment may be shown. Countries of origin are identified with a zero (0) following the name of the country whereas countries of shipment are identified with the number one (1) following the name of the country.

TOTALS:

1. TSUSA number by country of origin.
2. TSUSA number.

REPORT SM 311

**U.S. WATERBORNE GENERAL IMPORTS OF MERCHANDISE
BY TYPE OF VESSEL, BY TRADE AREA, BY COASTAL DISTRICT, BY COUNTRY
OF LADING, BY CUSTOMS DISTRICT OF UNLADING**

Type of Vessel Codes:
 Type 1-Liner or Berth
 Type 4-Tanker
 Type 5-Irregular or Tramp
 Coastal District Codes:
 1. North Atlantic
 2. South Atlantic
 3. Gulf
 4. South Pacific
 5. North Pacific
 6. Great Lakes

COVERAGE: These figures represent waterborne general imports, i.e., the total of imports for immediate consumption plus entries into customs bonded storage and manufacturing warehouses. Imports by vessel are credited to the customs district and port at which the merchandise was unladen, even though this may be different from the customs district in which the goods were entered into warehouse or entered for immediate consumption.

The figures in this report do not include merchandise in any of the following categories:

1. Arrivals of cargo moving in transit under bond through the United States from one foreign country to another. Information on such shipments arriving by vessel is presented in Report SM 311 IT and table 2, Columns (4), (7), (10) and (13) of Report FT 985.
2. Import shipments on Army or Navy transports (vessels owned and operated by the Army or Navy). Information on such shipments is included in total U.S. import statistics presented in such reports as FT 900, 930, 950, 125, etc.
3. Import shipments of household and personal effects, shipments by mail and parcel post, shipments of vessels under their own power or afloat, and shipments covered by informal entries.
4. Import shipments valued at less than \$251 reported on formal entries.

None of the figures has been adjusted for change in price level.

Classification of dry cargo vessels as "liner" and "irregular or tramp" is based on characteristics of each voyage (whether the voyage is part of a scheduled berth operation, etc.) using the classification criteria of the Maritime Administration. Vessel shipments are classified as dry cargo ("liner" or "irregular") and tanker solely on the basis of the type of vessel without regard to the cargo carried. SM 311, SM 311-IT
SA 311, SA 311-IT

COVERAGE: A listing of monthly entrance detail cards in alphabetic arrangement of vessel name.

EXPLANATION OF CODES:

Type Service

- 1= Liner
- 4= Tanker
- 5= Irregular or Tramp

Rig

- 1= Motor dry cargo, steam dry cargo
- 2= Motor tanker, steam tanker
- 3= Tug
- 4= Barge (other than tanker), scow
- 5= Tanker Barge
- 6= Other, including yacht, gas, sloop, schooner, sailboat, houseboat, rowboat, research vessel

Ballast or Cargo

- 1= Vessel entered direct from foreign in ballast
- 2= Vessel entered direct from foreign with bulk cargo
- 3= Vessel entered direct from foreign with general cargo
- 4= Vessel entered via other domestic ports in ballast
- 5= Vessel entered via other domestic ports with bulk cargo
- 6= Vessel entered via other domestic ports with general cargo

Country and Subdivision or U.S. Port

Indicates first foreign country entering direct from (origin of inbound voyage) in terms of Schedule C code. Where "country from" has marked coastal differences a further distinguishing sub-country code is added-otherwise sub-country code is always "0". See change made on AE 350 No. 2 heading strip.

Type Vessels

- 1= All vessels except tanker
- 2= Tankers
- 0= Vessels from other domestic ports, Navy operated vessels, vessels in for repairs or crew changes, and all other types excluded by reason of FT 975 coverage.

Type Cargo

- 1= Bulk or general cargo
- 3= Ballast
- 0= All vessels coded "0" under type vessel.

Trip Code

- 0= No foreign cargo discharged at this port
- 1= Foreign cargo discharged at this port
- 9= Vessels under 26 net registered tons

Date	Passengers	Army engineer channel	District and port	Vessel manifest	Vessel name	Flag	Type service	Rig	Net registered tonnage	Ballast or cargo	Country and subdivision or U.S. Port	Type vessel	Type cargo	Trip code	Draft (feet)	0= Entrance code	Census use only	Serial no. Census use only

U.S. IMPORTS OF MERCHANDISE FOR CONSUMPTION AND GENERAL IMPORTS OF MERCHANDISE
CONTINENT BY COUNTRY OF ORIGIN BY TSUSA SCHEDULE BY TSUSA NUMBER BY UNIT CONTROL BY CUSTOMS DISTRICT OF ENTRY
(EXCLUDES QUANTITY ONLY ITEMS)

COVERAGE: Imports for consumption are a combination of imports for immediate consumption and withdrawals for consumption from bonded warehouses. General imports are a combination of imports for immediate consumption and entries into bonded warehouses. The statistics include merchandise imported by government agencies as well as by private importers, but exclude American goods returned by the U.S. armed forces for their own use. U.S. trade with Puerto Rico and with U.S. possessions and trade between the U.S. possessions is not included in this report, but imports into Puerto Rico from foreign countries are included. Merchandise shipped in transit through the United States from one foreign country to another, when documented as such through U.S. customs, is not included. See the Foreword to Foreign Commerce and Navigation of the United States for a more complete statement on coverage.

COMMODITY CLASSIFICATION: Effective September 1963, the import statistics are compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA) which replaces Schedule A, 1960 edition.

SOURCE: The source of information for all of the imports included in this report is the import entry (various customs forms), which importers are required to file with collectors of customs for each shipment arriving in the United States. Effective January 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified or corrected as necessary, by customs examiners on all formal consumption and warehouse entries. (Verification of imports valued \$250 or less was discontinued effective July 1965.) Information on warehouse withdrawals, though not subject to the examiner verification procedure directly, should be improved indirectly by the verification of the warehouse entries to which they correspond.

VALUE: The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding U.S. import duties, ocean freight, and marine insurance.

CALCULATED DUTY: Calculated duty represents the estimated import duties and taxes collected under rates established by the Tariff Act of 1930 as amended by the Tariff Classification Act of 1962, the Internal Revenue Code, Public Laws, and Presidential Proclamations on imports of merchandise entering the United States for consumption. The calculated duty data shown in this tabulation have not been verified. Users interested in these data should therefore use the data with caution and only after verification of the data shown by actual calculation (using the applicable rate or rates of duty for commodity classifications as shown in TSUSA). Effective January 1961, calculated duty for Rate Provision 70 is not included in this table.

UNIT CONTROL: In those instances where a TSUSA number has two units of quantity, value is shown with only one of the units. For the items with which value is shown, unit control zero (0) is shown. Unit control 2 is shown for the items with which value is not shown. Calculated duty may appear with either the first or second unit of quantity. When calculated duty is based upon the value, it appears with the first unit of quantity. When quantity is the basis for calculated duty, the calculated duty is shown with the unit of quantity upon which it is based.

LOW-VALUE SHIPMENTS: Data on all import shipments valued under \$251 are estimated on the basis of a 1-percent sample. The estimated data are presented in this tabulation by country of origin under arbitrary TSUSA number 9999 500. The number of shipments included in the sample is shown in the quantity column for TSUSA number 9999 500. See the General Explanation of Report FT 135 for a more complete statement on the handling of low-value shipments.

TOTALS:

1. Country of origin by TSUSA number by unit control, by customs district of entry.
2. Country of origin by TSUSA schedule.

3. Country of origin.
4. Continent.

5. Overall.

U.S. IMPORTS OF MERCHANDISE FOR CONSUMPTION AND GENERAL IMPORTS OF MERCHANDISE
TSUSA SCHEDULE BY TSUSA NUMBER BY UNIT CONTROL BY COUNTRY OF ORIGIN BY
CUSTOMS DISTRICT OF ENTRY BY RATE PROVISION BY TYPE
(EXCLUDES QUANTITY ONLY ITEMS)

COVERAGE: Imports for consumption are a combination of imports for immediate consumption and withdrawals for consumption from bonded warehouses (Types 1, 2, 5 and 6 as defined below). General imports are a combination of imports for immediate consumption and entries into bonded warehouses (Types 1, 3, 5 and 6 as defined below). The statistics include merchandise imported by government agencies as well as by private importers, but exclude American goods returned by the U.S. armed forces for their own use. U.S. trade with Puerto Rico and with U.S. possessions and trade between the U.S. possessions is not included in this report, but imports into Puerto Rico from foreign countries are included. Merchandise shipped in transit through the United States from one foreign country to another, when documented as such through U.S. customs, is not included. See the Foreword to Foreign Commerce and Navigation of the United States for a more complete statement on coverage.

TYPES OF IMPORTS: Imports are classified by type for statistical purposes, as follows: Type 1 - merchandise entered for immediate consumption; Type 2 - merchandise withdrawn from bonded storage warehouses for consumption, withdrawn from bonded smelting and refining warehouses for consumption or for export, and transferred from bonded storage warehouses to bonded manufacturing warehouses for manufacturing and export; Type 3 - merchandise entered into bonded storage warehouses, and entered into bonded smelting and refining warehouses; Type 4 - merchandise withdrawn from bonded storage warehouses for exportation (compilation of statistics discontinued effective March 1958); Type 5 - merchandise entered into bonded manufacturing warehouses for manufacture and export (direct entry only); Type 6 - merchandise entered into bonded storage warehouses in foreign trade zones as "privileged" merchandise.

COMMODITY CLASSIFICATION: Effective September 1963, the import statistics are compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA), which replaces Schedule A, 1960 edition.

SOURCE: The source of information for all of the imports included in this report is the import entry (various customs forms), which importers are required to file with collectors of customs for each shipment arriving in the United States. Effective January 1962, statistical factors of country of origin, net quantity, value and commodity classification are verified, or corrected as necessary, by customs examiners on all formal consumption and warehouse entries. (Verification of imports valued \$250 or less was discontinued effective July 1965). Information on warehouse withdrawals, though not subject to the examiner verification procedure directly, should be improved indirectly by the verification of the warehouse entries to which they correspond.

VALUE: The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding U.S. import duties, ocean freight, and marine insurance.

CALCULATED DUTY: Calculated duty represents the estimated import duties and taxes collected under rates established by the Tariff Act of 1930 as amended by the Tariff Classification Act of 1962, the Internal Revenue Code, Public Laws, and Presidential Proclamations on imports of merchandise entering the United States for consumption. The calculated duty data shown in this tabulation have not been verified. Users interested in these data should therefore use the data with caution and only after verification of the data shown by actual calculation (using the applicable rate or rates of duty for commodity classifications as shown in TSUSA). Effective January 1961, calculated duty for Rate Provision 70 is not included in this table.

UNIT CONTROL: In those instances where a TSUSA number has two units of quantity, value is shown with only one of the units. For the items with which value is shown, the unit control column is blank (unit control zero). Unit control code 2 is used for the items with which value is not shown. Calculated duty may appear with either the first or second unit of quantity. When calculated duty is based upon the value, it appears with the first unit of quantity. When quantity is the basis for calculated duty, the calculated duty is shown with the unit of quantity upon which it is based.

ECONOMIC CLASS: Code 0 - agricultural crude materials; code 1 - nonagricultural crude materials; code 2 - agricultural crude foodstuffs; code 3 - nonagricultural crude foodstuffs; code 4 - agricultural manufactured foodstuffs and beverages; code 5 - nonagricultural manufactured foodstuffs and beverages; code 6 - agricultural semimanufactures; code 7 - nonagricultural semimanufactures; code 8 - agricultural finished manufactures; code 9 - nonagricultural finished manufactures.

LOW-VALUEO SHIPMENTS: Data on all imports shipments valued under \$251 are estimated on the basis of a 1-percent sample. The estimated data are presented in this tabulation under arbitrary TSUSA number 999 9500, by country of origin, with arbitrary district code 99. The number of shipments included in the sample is shown in the quantity column for TSUSA number 9999 500. See the General Explanation of Report FT 135 for a more complete statement on the handling of low-valued shipments.

TOTALS:

1. TSUSA schedule by TSUSA number by unit control by country of origin by Customs district of entry by rate provision by type.
2. TSUSA schedule by TSUSA number by unit control by country of origin.
3. TSUSA schedule by TSUSA number by unit control.
4. TSUSA part and subpart.
5. TSUSA schedule.
6. Overall.

Note: Totals identified as TYPES are totals for the different types of imports, as explained above. The first column contains the value total for types 1, 5, and 6; the second column contains the value total for type 2; and, the fifth column contains the value total for type 3.

U.S. IMPORTS OF MERCHANDISE FOR CONSUMPTION AND GENERAL IMPORTS OF MERCHANDISE
Customs District of Entry by Country of Origin by TSUSA Number by Unit Control
(Excludes Quantity Only Items)

19

COVERAGE: Imports for consumption are a combination of imports for immediate consumption and withdrawals for consumption from bonded warehouses. General imports are a combination of imports for immediate consumption and entries into bonded warehouses. The statistics include merchandise imported by government agencies as well as by private importers, but exclude American goods returned by the U.S. armed forces for their own use. U.S. trade with Puerto Rico and with U.S. possessions and trade between the U.S. possessions is not included in this report, but imports into Puerto Rico from foreign countries are included. Merchandise shipped in transit through the United States from one foreign country to another, when documented as such through U.S. customs, is not included. See the Foreword to Foreign Commerce and Navigation of the United States for a more complete statement on coverage.

COMMODITY CLASSIFICATION: Effective September 1963, the import statistics are compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA) which replaces Schedule A, 1960 edition.

SOURCE: The source of information for all of the imports included in this report is the import entry (various customs forms), which importers are required to file with collectors of customs for each shipment arriving in the United States. Effective January 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified or corrected as necessary, by customs examiners on all formal consumption and warehouse entries. (Verification of imports valued \$250 or less was discontinued effective July 1965.) Information on warehouse withdrawals, though not subject to the examiner verification procedure directly, should be improved indirectly by the verification of the warehouse entries to which they correspond.

VALUE: The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding U.S. import duties, ocean freight, and marine insurance.

CALCULATED DUTY: Calculated duty represents the estimated import duties and taxes collected under rates established by the Tariff Act of 1930 as amended by the Tariff Classification Act of 1962, the Internal Revenue Code, Public Laws, and Presidential Proclamations on imports of merchandise entering the United States for consumption. The calculated duty data shown in this tabulation have not been verified. Users interested in these data should therefore use the data with caution and only after verification of the data shown by actual calculation (using the applicable rate or rates of duty for commodity classifications as shown in TSUSA). Effective January 1961, calculated duty for Rate Provision 70 is not included in this table.

UNIT CONTROL: In those instances where a TSUSA number has two units of quantity, value is shown with only one of the units. For the items with which value is shown, the unit control column is blank (unit control code zero). Unit control code 2 is used for the items with which value is not shown. Calculated duty may appear with either the first or second unit of quantity. When calculated duty is based upon the value, it appears with the first unit of quantity. When quantity is the basis for calculated duty, the calculated duty is shown with the unit of quantity upon which it is based.

LOW-VALUED SHIPMENTS: Data on all import shipments valued under \$251 are estimated on the basis of a 1-percent sample. The estimated data are presented in this tabulation under arbitrary district code 99 and arbitrary TSUSA number 9999 500, by country of origin. The number of shipments included in the sample is shown in the quantity column for TSUSA number 9999 500. See the General Explanation of Report FT 135 for a more complete statement on the handling of low-valued shipments.

TOTALS:

1. Customs district of entry by country of origin by TSUSA number by unit control.

2. Customs district of entry by country of origin.

3. Customs district of entry.

4. Overall.

NOTE: The totals in the quantity columns at the end of each schedule are card count totals for the respective schedules. The totals in the last two lines of each district should be explained for the reader's convenience. Reading from left to right, the totals are as follows: card count for warehouse withdrawals, value for warehouse withdrawals, district dutiable value, district calculated duty, card count for warehouse entries, and value for warehouse entries. The last line contains the district value for imports for consumption and general imports.

District of entry code	Country of origin code	TSUSA number	Unit control	Customs district of entry description	Unit of quantity	Imports for consumption				General imports

UNITED STATES IMPORTS OF MERCHANDISE FOR CONSUMPTION AND
GENERAL IMPORTS OF MERCHANDISE
SIC Division by SIC-Based 2-Digit, 3-Digit, and 4-Digit Product Code
(Excludes Quantity Only Items)

COVERAGE: Imports for consumption are a combination of imports for immediate consumption and withdrawals for consumption from bonded warehouses. General imports are a combination of imports for immediate consumption and entries into bonded warehouses. The statistics include merchandise imported by government agencies as well as by private importers, but exclude American goods returned by the U.S. armed forces for their own use. U.S. trade with Puerto Rico and with U.S. possessions and trade between the U.S. possessions is not included in this report, but imports into Puerto Rico from foreign countries are included. Merchandise shipped in transit through the United States from one foreign country to another, when documented as such through U.S. customs, is not included. See the Foreword to Foreign Commerce and Navigation of the United States for a more complete statement on coverage.

COMMODITY CLASSIFICATION: In this tabulation, the import commodity data, which are initially compiled in terms of the classifications in Tariff Schedules of the United States Annotated (TSUSA), are rearranged and summarized into product classifications based on the Standard Industrial Classification (SIC). While a complete and precise presentation of imports in terms of the SIC-based classifications is not possible, this presentation is intended to identify the import data which are most comparable to output data for individual commodities. Additional information regarding the classifications used in this tabulation and their relationship to the TSUSA and SIC classifications is presented in the publication entitled U.S. Imports for Consumption and General Imports, SIC-Based Product Code, by Area: 1965.

SOURCE: The source of information for all of the imports included in this report is the import entry (various customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Effective January 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified, or corrected as necessary, by customs examiners on all formal consumption and warehouse entries. (Verification of imports valued \$250 or less was discontinued effective July 1965.) Information on warehouse withdrawals, though not subject to the examiner verification procedure directly, should be improved indirectly by the verification of the warehouse entries to which they correspond.

VALUE: The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding U.S. import duties, ocean freight, and marine insurance.

LOW-VALUED SHIPMENTS: Effective July 1965, data on all import shipments valued under \$251 are estimated on the basis of a 1-percent sample. Prior to July 1965, the estimates for low-valued shipments were based on a 1-percent sample of the following: effective January 1958, formal immediate consumption entries valued under \$100 and informal entries (valued not more than \$250); effective January 1962, warehouse entries valued under \$100 and effective January 1963, warehouse withdrawals for consumption valued under \$100 were added to the sample. The estimated data for the first six months of the year have been combined with that for the last six months and are presented in this tabulation along with other miscellaneous commodities under arbitrary commodity number 9900. For additional information regarding the handling of low-valued shipments, see the General Explanation in the publication entitled U.S. Imports for Consumption and General Imports, SIC-Based Product Code, by Area: 1965.

TOTALS:

1. SIC-based 4-digit product.
2. SIC-based 3-digit product.
3. SIC-based 2-digit product.
4. SIC division.

UNITED STATES IMPORTS OF MERCHANDISE FOR CONSUMPTION
AND GENERAL IMPORTS OF MERCHANDISE
SIC-Based 8-Digit Product Code by Country of Origin
(Excludes Quantity Only Items)

COVERAGE: Imports for consumption are a combination of imports for immediate consumption and withdrawals for consumption from bonded warehouses. General imports are a combination of imports for immediate consumption and entries into bonded warehouses. The statistics include merchandise imported by government agencies as well as by private importers, but exclude American goods returned by the U.S. armed forces for their own use. U.S. trade with Puerto Rico and with U.S. possessions and trade between the U.S. possessions is not included in this report, but imports into Puerto Rico from foreign countries are included. Merchandise shipped in transit through the United States from one foreign country to another, when documented as such through U.S. customs, is not included. See the Foreword to Foreign Commerce and Navigation of the United States for a more complete statement on coverage.

COMMODITY CLASSIFICATION: In this tabulation, the import commodity data, which are initially compiled in terms of the classifications in Tariff Schedules of the United States Annotated (TSUSA), are rearranged and summarized into product classifications based on the Standard Industrial Classification (SIC). While a complete and precise presentation of imports in terms of the SIC-based classifications is not possible, this presentation is intended to identify the import data which are most comparable to output data for individual commodities. Additional information regarding the classifications used in this tabulation and their relationship to the TSUSA and SIC classifications is presented in the publication entitled U.S. Imports for Consumption and General Imports, SIC-Based Product Code, by Area: 1964.

SOURCE: The source of information for all of the imports included in this report is the import entry (various customs forms), which importers are required to file with Collectors of Customs for each shipment arriving in the United States. Effective January 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified, or corrected as necessary, by customs examiners on all formal consumption and warehouse entries. Information on warehouse withdrawals, though not subject to the examiner verification procedure directly, should be improved indirectly by the verification of the warehouse entries to which they correspond.

VALUE: The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding U.S. import duties, ocean freight, and marine insurance.

LOW-VALUED SHIPMENTS: Data on formal entry shipments valued under \$100 and informal entry shipments (valued not more than \$250, by definition) are estimated on the basis of a one-percent sample. These estimates are excluded from the detailed commodity statistics but are included along with other miscellaneous commodities under arbitrary commodity number 990000 00. For additional information regarding the handling of low-valued shipments, see the General Explanation in the publication entitled U.S. Imports for Consumption and General Imports, SIC-Based Product Code, by Area: 1964.

U.S. EXPORTS OF UNMANUFACTURED COTTON AND SELECTED MANUFACTURED PRODUCTS
OF COTTON AND OTHER FIBERS
(TABULATION OF MONTHLY EXPORT BCD SUMMARY RECORDS)
COMMODITY BY COUNTRY OF DESTINATION BY DISTRICT OF EXPORTATION
(DOMESTIC AND FOREIGN MERCHANDISE SHOWN SEPARATELY)

COVERAGE: Export statistics include government as well as non-government shipments to foreign country. The export statistics, therefore, include Department of Defense Military Assistance Program—Grant-Aid shipments, Mutual Security Program economic assistance shipments, and shipments of agricultural commodities under P. L. 480 (The Trade Development and Assistance Act of 1954, as amended) and related laws. Shipments to U.S. armed forces and diplomatic missions abroad for their own use are not included in export statistics. Merchandise shipped in transit through the United States between foreign countries, when documented as such through U.S. Customs, is also excluded. U.S. trade with Puerto Rico and U.S. possessions is not included in this report, but the export trade of Puerto Rico with foreign countries is included as a part of the U.S. export trade. Values, in general, are based on selling price, and include transportation and other costs to the U.S. port of exportation. Further information is contained in the "General Explanation" in the Forward of Report FT 410. For a complete statement, see the forward to Foreign Commerce and Navigation of the United States.

CLASSIFICATIONS WITH DOUBLE UNITS OF QUANTITY: For some commodities (principally textiles), shippers are required to report net quantity information in two units, such as pound and square yard. For such commodities, two consecutive reporting numbers are provided in the 1965 edition of Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States. Net quantity information for each reporting number is required to be shown on the Shipper's Export Declaration in the specified unit. Value is required to be reported only with the number which has a superior "v" shown following the unit of quantity in Schedule B. This tabulation presents net quantity information for those "double unit" reporting numbers for which value is not required. The information shown for exports to Canada include estimates for shipments individually valued \$100-\$1,999 based on a 10-percent random sample of such shipments. For countries other than Canada, the figures shown include estimates for shipments individually valued \$100-\$499 based on a 50-percent random sample of such shipments. Data for shipments to Canada valued \$2,000 and over and data for shipments to countries other than Canada valued \$500 and over are fully compiled. (Note: The Schedule B commodity totals shown in the "Number in Sample" column represent the number in the 10-percent sample for Canada combined with the number in the 50-percent sample for other countries. These totals are provided for Bureau of the Census use.) For a further description of the sampling procedures and information regarding the reliability of the data, see the Forward of the 1965 monthly issues of Report FT 410. The data shown for individual Schedule B commodity numbers exclude shipments valued at less than \$100 but information on such shipments to each country is estimated and presented under Schedule B commodity number 9310040 (not shown in this tabulation). See the June 1953 issue of Foreign Trade Statistics Notes for a description of the method used to estimate the dollar value of such shipments.

UNITED STATES EXPORTS OF DOMESTIC AND FOREIGN MERCHANDISE FROM THE VIRGIN ISLANDS
(Tabulation of Corrected Detail Cards)
COMMODITY BY COUNTRY OF DESTINATION
(Domestic and Foreign Merchandise Shown Separately)

COVERAGE: Statistics on exports from the Virgin Islands of the United States include shipments of merchandise to foreign countries only. They do not include shipments to the United States or to other United States possessions. The data in this table are not included in the statistics on United States exports to foreign countries. Further information is contained in the "General Explanation" of Report No. FT 800. For complete statement, see Foreword to Foreign Commerce and Navigation of the United States.

SHIPMENTS OF MERCHANDISE FROM THE UNITED STATES TO PUERTO RICO
(Listing of Monthly Schedule B Summary Cards)
COUNTRY OF DESTINATION (PUERTO RICO) BY COMMODITY GROUP BY
COMMODITY (SCHEDULE B)

COVERAGE: Data on shipments from the United States to Puerto Rico exclude shipments of supplies and equipment for the use of U.S. armed forces. Shipments to U.S. Government agencies, other than shipments of office furniture, equipment and supplies for the use of such agencies, are included. Values, in general, are based on selling price, and include transportation and other costs to the U.S. port of exportation. Further information is contained in the "General Explanation" in foreword of Report FT 800. For complete statement, see foreword to Foreign Commerce and Navigation of the United States.

U.S. WATERBORNE EXPORTS OF DOMESTIC AND FOREIGN MERCHANDISE
BY TYPE OF VESSEL, BY TRADE AREA, BY COASTAL
DISTRICT, BY COUNTRY OF UNLADING, BY
CUSTOMS DISTRICT OF LADING

Type of Vessel Codes:
Type 1-Liner or Berth
Type 4-Tanker
Type 5-Irregular or Tramp
Coastal District Codes:
1-North Atlantic
2-South Atlantic
3-Gulf
4-South Pacific
5-North Pacific
6-Great Lakes

COVERAGE: Exports by vessel are credited to the customs district and port at which the merchandise was laden and include re-exports, trade between Puerto Rico and foreign countries, export shipments to U.S. government agencies except the U.S. armed forces, and exports under the various foreign aid programs made on commercial vessels under other than Department of Defense charter arrangements as explained below.

The figures in this report do not include merchandise in any of the following categories:

1. Shipments to the U.S. armed forces abroad for their own use, shipments between continental United States and its possessions, and shipments between the possessions.
2. Departures of cargo moving in transit under bond through the United States from one foreign country to another. Information on such shipments departing by vessel is presented in Report SM 705 IT, and table 1, columns (5), (10), (14), and (17) of Report FT 985.
3. Export shipments of Department of Defense controlled cargo and export shipments of "Special Category" commodities. Information on this subject is included in total United States export statistics presented in such reports as FT 900, 930, 950, 410, 420, etc., and combined tonnage data for both classes of shipments by vessel are also shown in Report FT 985. Department of Defense controlled cargo represents cargo exported by the Department of Defense under special foreign aid programs such as Department of Defense Military Assistance Program-Grant-Aid, etc., shipped on commercial or military vessels (vessels owned and operated by Department of Defense).
4. Export shipments of household and personal effects, shipments by mail and parcel post, and shipments of vessels under their own power or afloat.
5. Export shipments valued under \$100.

None of the figures has been adjusted for change in price level.

Classification of dry cargo vessels as "liner" and "irregular or tramp" is based on characteristics of each voyage (whether the voyage is part of a scheduled berth operation, etc.) using the classification criteria of the Maritime Administration. Vessel shipments are classified as dry cargo ("liner" or "irregular") and tanker solely on the basis of vessel used without regard to the cargo carried.

EXPLANATION OF CODES:

Type Service

- Type service
1 Liner
4 Tanker
5 Irregular or Tramp

Rig

- 1 Motor dry cargo, steam dry cargo
- 2 Motor tanker, steam tanker
- 3 Tug
- 4 Barge (other than tanker), scow
- 5 Tanker Barge
- 6 Other, including yacht, gas, sloop, schooner, sailboat, houseboat, rowboat, research vessel

Ballast or Cargo

- 1 Vessel cleared direct to foreign in ballast
- 2 Vessel cleared direct to foreign with bulk cargo
- 3 Vessel cleared direct to foreign with general cargo
- 4 Vessel cleared via other domestic ports in ballast
- 5 Vessel cleared via other domestic ports with bulk cargo
- 6 Vessel cleared via other domestic ports with general cargo

Country and Subdivision or U.S. Port

Indicates first foreign country clearing direct to (Schedule C code). Where "country to" has marked coastal differences a further distinguishing sub-country code is added-otherwise sub-country code is always "0". See change made on AE 750 No. 2 heading strip.

Type Vessel

- 0 Vessels to other domestic ports, Navy operated vessels, vessels in for repairs or crew changes, and all other types excluded by reason of FT 975 coverage

Type Cargo

- 1 Bulk or general cargo
3 Ballast
0 All vessels coded "0" under type vessel

Trip Code

- 0 No U.S. export or in-transit export was laden at this port
- 1 U.S. export or in-transit export cargo was laden at this port
- 9 Vessels under 26 net registered tons

DISTRICT, PORT AND MANIFEST HEADER LISTING OF VESSEL CLEARANCES

EXPLANATION OF CODES:

Type Service

- Type Service
1=Liner
4=Tanker
5=Irregular or Tramp

Rig

- 1 =Motor dry cargo, steam dry cargo
2 =Motor tanker, steam tanker
3 =Tug
4 =Barge (other than tanker), scow
5 =Tanker Barge
6 =Other, including yacht, gas, sloop, schooner,
sailboat, houseboat, rowboat, research vessel

Ballast or Cargo

- 1 = Vessel cleared direct to foreign in ballast
2 = Vessel cleared direct to foreign with bulk cargo
3 = Vessel cleared direct to foreign with general cargo
4 = Vessel cleared via other domestic ports in ballast
5 = Vessel cleared via other domestic ports with bulk cargo
6 = Vessel cleared via other domestic ports with general cargo

Country and Subdivision or U.S. Port

Indicates first foreign country clearing direct to (Schedule C code). Where "country to" has marked coastal differences a further distinguishing sub-country code is added-otherwise sub-country code is always "0". If clearing via domestic ports, indicates first U.S. port vessel enters in terms of Schedule D code.

Type Vessel

- 1 = All vessels except tankers
2 = Tankers
0 = Vessels to other domestic ports, Navy operated vessels, vessels in for repairs or crew changes, and all other types excluded by reason of FT 975 coverage

Type Cargo

- 1 = Bulk or general cargo
3 = Ballast
0 = All vessels coded "0" under type vessel

Trip Code

- 0 = No U.S. export or in-transit export cargo was laden at this port
1 = U.S. export or in-transit export cargo was laden at this port
9 = Vessels under 26 net registered tons

UNITED STATES EXPORTS OF DOMESTIC AND FOREIGN MERCHANDISE
SCHEDULE B SECTION BY SCHEDULE B DIVISION BY SCHEDULE B GROUP BY SCHEDULE B SUBGROUP BY
SCHEDULE B COMMODITY NUMBER BY MONTH

(Domestic and Foreign Merchandise Shown Separately)

COVERAGE: Export statistics include government as well as non-government shipments to foreign countries. The export statistics, therefore, include Department of Defense Military Assistance Program--Grant--Aid shipments, Mutual Security Program economic assistance shipments, and shipments of agricultural commodities under P.L. 480 (The Trade Development and Assistance Act of 1954, as amended) and related laws. Shipments to United States armed forces and diplomatic missions abroad for their own use are not included in export statistics. Merchandise shipped in transit through the United States between foreign countries, when documented as such through United States Customs, is also excluded. United States trade with Puerto Rico and United States possessions is not included in this report, but the export trade of Puerto Rico with foreign countries is included as a part of the United States export trade. Values, in general, are based on selling price, and include transportation and other costs to the United States port of exportation. Further information is contained in the "General Explanation" in foreword of Report FT 410. For complete statement, see Foreword to Foreign Commerce and Navigation of the United States.

The export statistics presented in this tabulation compiled in accordance with the classifications listed in the 1965 edition of Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States. The figures shown include estimates for shipments to Canada valued \$100--\$1,999 based on a ten percent sample of such shipments and estimates for shipments to countries other than Canada valued \$100--\$499 based on a fifty percent sample of such shipments. (Note: The figures shown in the "Number in sample" column represents the number in the 10 percent sample for shipments to Canada combined with the number in the 50 percent sample for shipments to other countries. These totals have been provided for Bureau of the Census use.) For a further description of the sampling procedures and information regarding the reliability of the data, see the foreword of the monthly issues of Report FT 410. The data shown for individual Schedule B commodity numbers exclude shipments valued at less than \$100 but information on such shipments is estimated and presented under Schedule B commodity number 9310040. See the June 1953 issue of Foreign Trade Statistics Notes for a description of the method used to estimate the dollar value of such shipments.

Effective with the statistics for January 1965, security restrictions permit the release of world totals (all countries combined without further detail) on exports of all commodities referred to as Special Category commodities. Accordingly, information on exports of those commodities is presented in this tabulation under the applicable Schedule B commodity numbers. See the January 1965 issue of Report FT 410 for further explanation and a list of the Special Category commodities.

Chapter V - Origin of Exports and Destination of Imports

The Census Bureau frequently receives inquiries regarding the possibility of obtaining information showing the place of origin for domestic merchandise exported from the United States and the place within the United States to which imported merchandise is destined. This type of information is not compiled as a part of the foreign trade statistics program since it is not required to be reported on import entries or export declarations, the basic sources from which the foreign trade data are compiled.

In recognition of the need for information on the origin of exported merchandise, the Census Bureau has conducted some special surveys to obtain such data. The results of the most recent survey were released in a report entitled Survey of the Origin of Exports of Manufactured Products: 1963 and 1960, Series M 161(63)-1. This report includes distributions of manufacturers' exports by regions, States, and metropolitan areas, and by Standard Industrial Classifications. This information was reported by manufacturers to the Census Bureau for products that the manufacturers knew were to be exported by the plant directly or through others with no additional manufacturing. Copies of this report may be obtained from the Bureau of the Census.

Some of the requests which have been received for information on the origin of exports have contained the suggestion that exporters be required to report such information on export declarations and that this information be compiled as a part of the regular foreign trade statistics program. After extensive consideration, the conclusion has been reached that the institution of a requirement for reporting such information on the export declaration does not provide a practical solution to the problem. The added reporting burden on exporters would be great. Also, the exporter or the person preparing the export declaration (frequently an agent acting on behalf of the exporter) may not have information about the place of origin of the merchandise. In addition, the added processing costs for tabulating place of origin information from the export declarations could be expected to be disproportionately high because of the large number of individual observations to be sorted and summarized.

Investigations into the possibility of compiling place of origin information from export declarations have indicated that this type of data would be extremely difficult to obtain in some instances. Many commodities exported from the United States actually originate in many different parts of the country. Automobiles, for instance, may be assembled in Michigan but the parts which go to make up the automobile may have been manufactured or "originated" in almost every area of the United States. In the case of automobiles, therefore, the most that could be attempted without an impractical amount of detail would be to show where the automobiles were assembled into the form in which they are ready for export. This would also be true for many other commodities.

In some cases further difficulties would exist with regard to determining the place at which the commodities were assembled into final form ready for export. An electric generator for installation on an automobile might be manufactured in Indiana and then shipped to Michigan for storage and for future sale as a replacement part. The generator eventually might be shipped from Michigan to Louisiana for export. While the generator could be defined as actually assembled ready for export in Indiana, the practical difficulties of determining this fact might be such that it would be necessary to credit Michigan as the place at which the generator was finally assembled ready for export. Similarly, pharmaceuticals may be made in many parts of the United States but packaged as shipments of mixed pharmaceuticals for export in New York. Because of the difficulties of obtaining information on where each part of a mixed shipment of pharmaceuticals was created or assembled in final form ready for export, it probably would be necessary to credit the whole shipment to the place of final packaging, in this case New York.

The examples given above provide some indication of the extent of the problems which would be involved in attempting to obtain information regarding origin of exports from the export declarations and at the present time there are no plans for trying to obtain such information from this source.

Chapter VI - List of Classification Schedules

To facilitate the compilation of the foreign trade statistics, various classification schedules are used for translating data such as commodity, country, district, etc. into numeric codes. The schedules contain lists of the names or descriptions of the items with their assigned numeric codes. Following is a list of the classification schedules used in compiling and publishing the foreign trade statistics:

Schedule A - Statistical Classification of Commodities Imported Into the United States

Schedule B - Statistical Classification of Domestic and Foreign Commodities Exported From the United States

Schedule C - Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics

Schedule D - Code Classification of United States Customs Districts and Ports Used in Compiling the United States Foreign Trade Statistics

Schedule K - Code Classification of Foreign Ports by Geographic Trade Area and Country

Schedule P - Commodity Classification for Reporting Shipments From Puerto Rico to the United States

Schedule R - Code Classification and Definitions of Foreign Trade Areas

Tariff Schedules of the United States Annotated

Copies of Schedule B and TSUSA may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. For information regarding other schedules, contact the Bureau of the Census.

Chapter VII - Availability of Special Services

In addition to the sources of data described herein, the Census Bureau provides a special service whereby users of the statistics may obtain information at an earlier date than the release of published reports or may obtain data in greater detail or in different arrangement than that available in the statistics which are regularly released. The entire cost of the special work required to compile or duplicate the information from the basic data is charged to the subscriber. Special reports contracted for on a cost-to-subscriber basis are listed in current publications so that all users of foreign trade statistics may be informed of the type of reports being prepared and the cost involved. Additional subscribers may purchase any special reports listed in the publication.

The preparation of these reports on a cost basis is carried out in accordance with the Bureau of the Census "Policy Governing Special Work and Services" set forth in current issues of the Bureau of the Census catalog. This reads in part as follows:

"The Congress appropriates funds to the Bureau to carry out certain projects. Since funds are limited, the Bureau cannot prepare or publish all the useful tabulations of the information collected. Administrative decisions must be made with regard to what information will serve the largest number of needs and how much of the information of general interest can be made available within the limits of available funds. The use of the filled-in questionnaires and schedules is restricted by law to employees of the Bureau of the Census. The use of specific punchcards or magnetic tapes is restricted in accordance with the information shown thereon.

"The work sheets and tabulation sheets, which show more detail than is found in published reports, can be made available through some method of duplication such as photocopying or transcription. Basic source materials, such as schedules or punched cards, contain data that can be tabulated and used to furnish additional needed information. Arrangements can be made in some instances to furnish information in advance of publication. Such arrangements entail additional cost, which has to be recovered.

"There are available in the Bureau a variety of skills, equipment, and records which are maintained for meeting the regular commitments of the Bureau. These facilities can serve the needs of other Government agencies and other groups. The skills, equipment, and other resources can be made available for statistical operations such as survey design, mailing, field collection, machine tabulation, population estimates and forecasts, and similar tasks. Members of the staff are available on occasion for consultation.

"Services as indicated above are furnished at cost by the Bureau under the conditions described below. Cost is interpreted to mean the actual cost to the Bureau of the Census, including the cost of planning the special work and appropriate overhead charges.

A. Special transcriptions and tabulations of census data.—Special transcriptions and tabulations of data in the files of the Bureau of the Census will be undertaken on a cost basis as requested, provided there is no serious interruption of the regular work program of the Bureau. Those requesting special tabulations should understand that the data are based on surveys paid for by public funds and are, therefore, public property. The purposes for which such tabulations are obtained must not be contrary to the public interest nor must they be used to give unfair commercial or other advantage to any person or group.

"All unpublished data furnished by the Bureau will be accompanied, so far as feasible, by appropriate statements relative to the limitations of the data. When the condition of the data warrants it, the Bureau may specify that the material is for the information of the purchaser only and may not be published, or that any proposed publication of such material must be cleared with the Bureau before publication.

"Special tabulations paid for by nongovernmental groups will be undertaken with the understanding that:

1. The material may be published subsequently by the Bureau and made generally available either without charge or at cost of publication, if the Bureau regards the material to be of general interest. If such action is taken within the time period provided in the agreement, or within 6 months if no time period is provided in the agreement, the Bureau will notify all purchasers of such determination and the reasons therefor.
2. If not published, it may be made available to other Government agencies or to appropriate nonprofit research groups without charge or at cost of duplication.
3. A second request by other than a Government agency for the same information will generally be handled in the following manner, if the information has not already been published by the Bureau:
 - a. If a job has not been completed, the costs will be appropriately divided and results will be furnished to both parties.
 - b. When, within the time period provided in the original agreement, information furnished to commercial groups or private individuals is requested by other commercial groups or individuals, the subsequent party (or parties) will be charged not less than the amount paid by the first party obtaining the information. Specified time periods will generally not exceed 18 months. If no time period is provided in the agreement, this provision will apply for 6 months. If the cost to the Bureau for furnishing the information to the subsequent party is significantly less than that charged for the original information and the information is furnished within the agreed-upon time period referred to

above, the total cost will be prorated among the various parties in an equitable manner as determined by the Bureau and refunds made as necessary, provided that the amount for refund exceeds 10 percent of the cost of the original job, or \$25, whichever is larger. After the specified period, subsequent requests will be charged only the additional cost to the Bureau, if any, and no refunds to prior purchasers will be considered. If, for any reason, the Bureau feels that the purchaser of a special tabulation is making unfair or improper use of the information furnished, it may take such action as is deemed appropriate to protect the public interest.

"In order to keep the public informed of special tabulations that have been furnished, the Bureau will list them, except for small projects, in the Bureau of the Census Catalog."

Certain specific points in regard to the application of these policies to the various types of foreign trade reports are described below:

Type A. Advance reports containing final monthly figures not yet available in duplicated report form. Advance reports present postings from machine tabulation sheets at the time the sheets are made publicly available. These sheets are made available several weeks prior to the date on which reports containing the information are distributed in duplicated form. Since the information in advance reports is already publicly available at the time the advance reports are released, the data have to all intents and purposes been published by the Bureau of the Census and the Census "Policy Governing Special Work and Services" is therefore largely inapplicable. Anyone wishing the same type of report can obtain it only on paying the full price of the report, the price in all cases representing the actual clerical cost of posting information from the unduplicated machine tabulation sheets already made available for public reference.

Type B. Reports presenting recom compilations of information already published or already made available for public reference in the form of machine tabulation sheets.

These reports may be very simple and may for example merely represent recom compilations of information from machine sheets available for public reference. For example, a report of this type may present information on how much of a particular commodity was exported from the United States through a particular Customs district. This information is available for public reference in different form in copies of machine tabulation sheets showing exports in a commodity by country of destination by Customs district arrangement. The report in this example would essentially consist of combining the figures of the movement to each country through the particular Customs district into a total of the amounts shipped to all countries through that Customs district.

Some Type B reports are considerably more complicated rearrangements of information already publicly available. For example, SM 705, which is regularly made available for public reference, presents information of exports by vessel from the United States in United States port by foreign port by commodity by country arrangement. The subscriber to a report to be prepared on a cost basis may wish all of this information rearranged into commodity by United States port arrangement with no segregation by foreign port of unloading. Some such reports can be prepared by manually rearranging the information in the SM 705 in the form requested. In other cases it is substantially more efficient to retabulate the Bureau of the Census source material which was used to prepare the SM 705 into the form requested. The person requesting and paying for such a report pays for the cost of compiling the information either manually or by electronic equipment, whichever is more efficient.

The subscriber to Type B reports appears to be entitled to some assurance that other private organizations and individuals will not under ordinary circumstances obtain access to the information at the same time at no cost or at a substantially reduced cost. Type B reports will therefore ordinarily not be made available to the public without charge or at a substantially reduced cost until 6 months after the reports have been transmitted to the person or organization paying for them. However, the Bureau of the Census reserves the right to publish the data at an earlier date under circumstances such as those described in the extract from the Bureau's "Policy Governing Special Work and Services" quoted above. In such cases the subscriber will be notified that public release is being made prior to the expiration of the 6-month interval. The subscriber will not specifically be notified of any release at the end of the 6-month interval. Public release by the Bureau prior to the expiration of the 6-month interval will not normally occur where the subscriber obtained, and is using, the information for purposes of market research or to determine his own competitive position in the market for a particular product or service.

Where the Bureau receives requests from private organizations or individuals for the information in Type B reports before the expiration of the 6-month or other interval described above, a policy will be followed of requesting the inquirer to pay the same amount as the person who originally subscribed to the report.

If the cost to the Bureau for furnishing the information to the subsequent party (parties) is significantly less than that charged for the original information the total cost will be prorated among the various parties in an equitable manner as determined by the Bureau and refunds made as necessary, provided that the amount for refund exceeds 10 percent of the cost of the original job, or \$25, whichever is larger.

Although information in such reports is being made available on request to Government agencies for their own use during the period the report is not to be released, such agencies are not permitted to release the information publicly without permission having been first obtained from the Bureau. Such permission is granted only under circumstances falling within the Bureau policy quoted above.

Preliminary Investigations

In addition to the actual work involved in preparing Type B and Type C reports, there are, in some cases, considerable amounts of work required in preliminary investigations of basic records even before estimates of the cost of preparing the reports can be made. These preliminary investigations of basic records, depending on the information to be obtained for the report, include such determinations as the following:

1. Determination of whether the desired information is available.
2. Determination of whether the release of desired information would tend to reveal the transactions of individual firms, in which case the information would not be released.
3. The determination of the best procedure under which the information would be obtained. This determination would include the comparison of costs under alternate procedures and the selection of the procedure with the lowest cost.

Preliminary investigations along the lines outlined above are not required for all reports. However, if a preliminary investigation is required before the cost of some reports can be estimated, persons requesting such reports will be charged the cost of the investigation. Wherever it is necessary to make a charge for preliminary investigation, the charge will usually be \$125.

Request for additional information in regard to the preparation and release of foreign trade special reports prepared on a cost basis should be addressed to the Foreign Trade Division, Bureau of the Census, Washington, D.C. 20233.

C. Reports which present information not publicly available in any form. Included in this are reports showing separate statistics on exports or imports of individual products included, without segregation, in a Schedule B or a TSUSA commodity classification regularly shown in the published statistics, and other reports containing information on exports and imports not available in published reports or in unduplicated copies of machine tabulation sheets made available for public reference. Information in Type C reports can, therefore, only be obtained from information on punch cards, electronic computer tape, Shipper's Export Declarations, or import entry forms not publicly available.

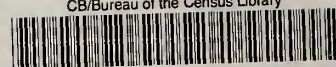

In general, the policy followed in making Type C reports publicly available is similar to the policy followed for Type B as described above. Since in contrast to Type B, Type C reports represent newly-compiled information not otherwise publicly available, there is a greater likelihood that the Bureau may find it necessary to release the information in Type C reports at a date earlier than 6 months after transmittal to the subscriber.
